## Winter Weather Advisory

We wish to advise you of an upcoming shift in weather with risk of low-elevation snow for the Lower Mainland.

### Details:

- **Timespan:** Sunday, November 27<sup>th</sup> to Saturday, Dec 3<sup>rd</sup>
- Cold temperatures. Temperatures will be 5 to 20 degrees colder than normal and will begin to drop Sunday, with the coldest days expected late in the week
- Gradual warming is expected to begin by next weekend (Dec 3-4, 2022)
- Widespread snow possible throughout the week with

forecasts of 5-20 cm of accumulation Tuesday/Wednesday

### Potential impacts for consideration

- Changing weather conditions may impact regular commutes and transportation corridors
- Staff may be impacted in their travel to and from work sites
- Blowing snow and accumulating snow on roads may make travel challenging
- Power outages are possible from moderate to strong gusty winds, or infrastructure damage from ground instability
- Menno Place may be directly impacted and will prepare for power failures

### Potential actions to take

- Arrange alternative transportation, such as car pooling, if uncomfortable with driving in these conditions.
- Sign up for weather alerts through [Alertable](#), [WeatherCAN](#), and [AlertMe](#)
- Make sure on-call leadership is aware and knows how to report any impacts
- Maintenance is working hard to keep our campus clear of snow and ice.
- Take precautions when walking/driving and wear proper footwear.

Sincerely,

**Jeanette Lee**

Director, Human Resources
